VITRON IG-6

VITRON
Your Material Specialist

Our glass IG-6 features excellent transmittance and low thermal change in refractive index and dispersion.

IG-6 is ideal for applications in combination with other IR material for color corrected designs and infrared optical systems without thermal defocusing in the 1-12 µm spectrum.

Molding, classical polishing or Single-Point-Diamond-Machining permits the production of optical components with flat, spherical and/or aspherical shaped surfaces for the Infrared and Optoelectronics industries.

Antireflection coatings further improve transmission by reducing the reflection at the air-glass interfaces.

VITRON currently produces 6 different types of Chalcogenide Glasses that are applicable to optics and optoelectronics system design.

Typical delivery in form of blanks:

Chemical Properties

VITRON chalcogenide glasses are insoluble in water. Under normal circumstances, no reactions are observed between glass and organic solvents.

Typical Forms of Supply

Our chalcogenid glasses are fine-annealed with 3.75 K/h. Variability of the index of refraction: between batches ≤ 10^{-3}
within a batch ≤ 10^{-4}

Semi-finished: Boules, Blanks in disk and rectangular shapes, Rods
Other shapes by customer request

Optical components: Windows, Lenses, Prisms and other optical parts according to customer specification
AR/AR coatings on customer request
